## Research Interests

---

I am generally interested in fractal geometry, dynamical systems, and the fine geometry of sets and measures in Euclidean space. Here are some areas that I am actively working in:

- geometry of overlapping self-similar sets, associated invariant measures, and their multifractal analysis
- general dimension theory, dimension interpolation, and classification
- symbolic dynamics, matrix products, and random substitutions
- thermodynamic formalism and multifractal analysis of self-affine measures
- fine scaling of self-affine sets and Assouad-type dimensions
